CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The present invention is directed to a solid porous matrix comprising a surfactant in combination with a bioactive agent. The solid porous matrix may be prepared by combining a surfactant and a therapeutic, together with a solvent, to form an emulsion containing random aggregates of the surfactant and the therapeutic, and processing the emulsion by controlled drying, or controlled agitation and controlled drying to form the solid porous matrix.

AB Topical and oral compositions containing unique blends of certain herbs effectively enhance breasts in human females by strengthening connective tissues and encouraging the growth of new cells. The topical composition contains Saw Palmetto berry extract, Chaste Tree berry extract, Fenugreek seed extract, Fennel seed extract, Comfrey extract, White Willow Bark extract, Ma Huang extract, Black Cohosh extract, Guarana extract, Passion Flower extract, Bilberry extract, Horsetail extract and Cayenne extract. The oral composition is a dietary supplement system containing two diet supplement compositions. The first composition contains extracts of Blessed Thistle, Hops, Wild Yam, Fenugreek seed, Saw Palmetto berry, Chaste Tree berry, Fennel seed, Black Cohosh, Damiana, Dong Quai, Lycium Chinese Herb, Scullcap Concentrate, and Curcubita Pepo Pumpkin seed, as well as Methyl Sulfonyl Methane and Royal Jelly. The second composition contains extracts of Saw Palmetto berry, Chaste Tree berry, Black Cohosh, Fennel seed, Fenugreek seed, Lycium Chinese Herb, Scullcap Concentrate, and Curcubita Pepo Pumpkin seed, as well as Methyl Sulfonyl Methane and Royal Jelly. The topical composition, which is preferably in cream form, is topically applied to the breast area daily for a sufficient period of time. The oral system, preferably in the form of a plurality of capsules taken separately, is orally administered on a daily basis for a sufficient period, wherein capsules of the first composition are taken for a first period and capsules of the second composition are taken for a subsequent second period. Most preferably, the topical and oral compositions are administered concurrently in a treatment regimen. The latter regimen provides a synergistic breast enhancement relative to the individual topical and oral treatments.
